## General

Uddeholm Impax Supreme is a premium-quality vacuum-degassed Cr-Ni-Mo-alloyed steel which is supplied in the hardened and tempered condition, offering the following benefits:

- No hardening risks
- No hardening costs
- Time saving, e.g. no waiting for heat treatment
- Lower tool cost (e.g. no distortion to rectify)
- Modifications easily carried out
- Can be subsequently nitrided to increase surface wear resistance or locally flame hardened to reduce surface damage

Uddeholm Impax Supreme is manufactured to consistently high quality standards with a very low sulphur content, giving a steel with the following characteristics:

- Good polishing and photo-etching properties
- Good machinability
- High purity and good homogeneity
- Uniform hardness

*Note: Uddeholm Impax Supreme is 100% ultrasonic tested.*

Heavier sections are supplied premachined which offers the following advantages compared with un-machined material:

- Saving of weight
- Non-decarburized surface
- Exact nominal size (plus tolerance)
- Less machining
- Absence of scale minimizes machine and tool wear

## Applications

- Injection moulds for thermoplastics
- Extrusion dies for thermoplastics
- Blow moulds
- Forming tools, press-brake dies (possibly flame hardened or nitrided)
- Aluminium die casting prototype dies
- Structural components, shafts

### Mechanical properties

Impact strength, tensile strength and the compressive strength depends on the hardness in the delivered condition.

#### IMPACT STRENGTH

The energy absorption at impact testing depends on the test material (bar size and delivered hardness), testing temperature and the specimen (type, location, and orientation in the bar).

The graph below shows how the impact energy changes as a function of the test temperature and hardness variation within the delivery hardness range.

**TENSILE STRENGTH**

Approx. values. Samples were taken from a flat bar, 90 x 300 mm (3,5" x 11,8").  
Hardness: 325 HB.

## Heat treatment

Uddeholm Impax Supreme is intended for use in the hardened and tempered condition, i.e. the delivery condition.

When, however, the steel is to be heat treated to a higher hardness or case hardened, the following instructions may be helpful.

### Soft annealing

Protect the steel and heat through to 700°C (1300°F). Then cool in the furnace at 10°C (50°F) per hour to 600°C (1110°F), then freely in air.

### Stress relieving

After rough machining the tool should be heated through to 550°C (1020°F), holding time 2 hours. Cool slowly to room temperature.

### Hardening

*Note:* The steel should be fully soft annealed before hardening.

*Preheating temperature:* 500–600°C (930–1110°F).

*Austenitizing temperature:* 850°C (1560°F).

The steel should be heated through to the austenitizing temperature and held at temperature for 30 minutes.

*Protect the tool against decarburization and oxidation during the hardening process.*

### Quenching media

- High speed gas/circulating atmosphere (Only suitable for small dimensions)
- Oil (60–80°C/140–175°F)
- Martempering bath 300°C (570°F) max. 4 minutes, then air

*Note:* Temper immediately tool reaches 50–70°C (120–160°F).

## Tempering

Choose the tempering temperature according to the hardness required by reference to the tempering graph. Temper twice with intermediate cooling to room temperature. Lowest tempering temperature 180°C (360°F) for small inserts, but preferred minimum is 250°C (480°F). Holding time at temperature minimum 2 hours.

### TEMPERING GRAPH

The diagram is valid for small samples 15 x 15 x 40 mm (0,6 x 0,6 x 1,6 in.) austenitized 30 min. at 850°C (1560°F), quenched in air and tempered 2 + 2 hours.

## Flame and induction hardening

Uddeholm Impax Supreme can be flame or induction hardened to a hardness of approx. 50 HRC. Cooling in air is preferable.

Further information can be obtained from the Uddeholm Technical Services Report "Flame hardening of Uddeholm Impax Supreme".

## Nitriding and nitrocarburizing

Nitriding gives a hard surface which is very resistant to wear and erosion. A nitrided surface also increases the corrosion resistance. For best result the following steps should be followed:

1. Rough machining
2. Stress tempering at 550°C (1020°F)
3. Grinding
4. Nitriding

Following surface hardness and nitriding depths will be achieved after nitriding:

	Temperature		Time h	Surface hardness HV <sub>1</sub>	Depth of case	
	°C	°F			mm	inch
Gas nitriding	525	977	20	650	0,30	0,012
	525	977	30	650	0,35	0,013
Ion-nitriding	480	896	24	700	0,30	0,012
	480	896	48	700	0,40	0,016
Nitrocarburizing	570	1058	2	700	0,10	0,004

## Cutting data recommendations

The cutting data below are to be considered as guiding values which must be adapted to existing local conditions.

More information can be found in our technical information "Cutting data recommendations".

**Welding**

Good results when welding tool steel can be achieved if proper precautions are taken during welding (elevated working temperature, joint preparation, choice of consumables and welding procedure). If the tool is to be polished or photo-etched, it is necessary to work with an electrode type of matching composition.

Welding method	TIG	MMA (SMAW)

<sup>1)</sup> For coated HSS end mill v<sub>c</sub> = 35–40 m/min. (115–131 f.p.m.)

<sup>2)</sup> Depending on radial depth of cut and cutter diameter

Further information is given in the Uddeholm brochure “Welding of Tool Steel”.

**Electrical-discharge machining**

If spark-erosion, EDM, is performed in the as delivered condition, the tool should then be given an additional temper at approx. 550°C (1020°F). If the steel has been rehardened, the additional tempering temperature should be 25°C (50°F) lower than the last tempering temperature used.

Further information can be obtained from the Uddeholm brochure “EDM of tool steel”.

## Hard-chromium-plating

After hard-chromium-plating, the tool should be tempered for approx. 4 hours at 180°C (350°F) within 4 hours of plating in order to avoid hydrogen embrittlement.

## Further information

Contact your local Uddeholm office for further information on the selection, heat treatment, application and availability of Uddeholm tool steels, including the publication "Steels for moulds".

## Photo-etching

Uddeholm Impax Supreme is particularly suitable for texturing by the photo-etching process. Its very low sulphur content ensures accurate and consistent pattern reproduction.

For heavy sections an extra tempering at 550°C (1020°F) before photo-etching is recommended.

## Polishing

Uddeholm Impax Supreme has good polishability in the hardened and tempered condition. After grinding, polishing is undertaken with aluminium oxide or diamond paste.

*Note:* Each steel grade has an optimum polishing time which largely depends on hardness and polishing technique. Overpolishing can lead to a poor surface finish (e.g. an "orange peel" effect).

Further information is given in the Uddeholm publication "Polishing of mould steel".

Large mould to produce laundry-baskets. Suitable grade for this moulding tool is Uddeholm Impax Supreme.

## Network of excellence

Uddeholm is present on every continent. This ensures you high-quality Swedish tool steel and local support wherever you are. Assab is our wholly-owned subsidiary and exclusive sales channel, representing Uddeholm in various parts of the world. Together we secure our position as the world's leading supplier of tooling materials.

Uddeholm is the world's leading supplier of tooling materials. This is a position we have reached by improving our customers' everyday business. Long tradition combined with research and product development equips Uddeholm to solve any tooling problem that may arise. It is a challenging process, but the goal is clear – to be your number one partner and tool steel provider.

Our presence on every continent guarantees you the same high quality wherever you are. Assab is our wholly-owned subsidiary and exclusive sales channel, representing Uddeholm in various parts of the world. Together we secure our position as the world's leading supplier of tooling materials. We act worldwide, so there is always an Uddeholm or Assab representative close at hand to give local advice and support. For us it is all a matter of trust – in long-term partnerships as well as in developing new products. Trust is something you earn, every day.
